

WM14 DIN / WM14 96

“Basic version” Three Phase Power Analyser

WM14DIN/96 IM cod. 8020700 9-03-2006

WARNING: the current inputs can be connected to the lines ONLY through current transformers. The direct connection is allowed only with the “PG” and “SG” options. **ATTENZIONE:** gli ingressi di corrente possono essere collegati SOLO mediante trasformatori amperometrici. La connessione diretta è permessa solo con le opzioni “PG” e “SG”. **WARNUNG:** Die Stromeingänge dürfen nur über Stromwandler angeschlossen werden. Der direkt Anschluß ist nur mit den “PG und SG” Optionen möglich. **ATTENTION:** les entrées courant doivent être connectées au réseau avec des transformateurs de courant. La connection directe est possible seulement avec les options “PG” et “SG”. **ATENCIÓN:** Las entradas de intensidad se deben conectar SIEMPRE a través de transformador de intensidad. La conexión directa es posible sólo con las opciones “PG” y “SG”.

F=1.25 A T 250V 5x20mm (24V AC); 630 mA T 250V 5x20mm (48V AC); 250 mA T 250V 5x20mm (115V AC); 125 mA T 250V 5x20mm (230V AC)

ENGLISH

- [1]- CT connection, 4-wire system (3Pn)
- [2]- CT/VT connection, 4-wire system (3P.n)
- [3]- ARON CT/VT connection (3P.A)
- [4]- 2-phase CT connection (2P)
- [5]- 3-phase CT connection, balanced load (3P)
- [6]- 1-phase CT connection (1P)
- [7]- 3-phase direct connection, 4 wire system (3P.n) (only for PG and SG models)
- [A]- Dual pulse output connection (available only on the PG option)
- [B]- RS485 4-wire connection ([c] last instrument, [d] instrument 1...n, [e] serial converter).

Important: only one ammeter input can be connected to earth, as shown in the electrical diagrams shown above.

SAFETY PRECAUTIONS
Read carefully the instruction manual. If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired. **Maintenance:** make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

TECHNICAL SPECIFICATIONS
Hardware: microprocessor based. **Keypad:** 3 keys.
Type of electrical system: Selectable: 1-phase, 2-phase, 3-phase with or without neutral unbal. load; 3-phase with neutral bal. load, 3-phase ARON. **Display:** LED 3x3 DGT; digit height 14mm (96x96mm) or 9mm (DIN). **Display refresh time:** 700ms. **Rated input current:** 5A (on ext. C.T.). **Max input current:** 6A (on ext. C.T.). **Overload:** 36A (6 *Imax) for 500ms; Voltage: permanent 1.2 * max function range value. **Rated input voltage** AV5: 660V L-L; AV6: 208V L-L **Wave-form:** sinusoidal or distorted wave. **Measurement method:** TRMS type. **Accuracy: W-VA:** ±(1% FS + 1DGT) from 0.25A to 6A, ±(1% FS + 5 DGT) from 0.03 to 0.25A; **var:** ±(2% FS + 1DGT) from 0.25 to 6A ±(2% FS + 5 DGT) from 0.03 to 0.25A; **Active energy:** X-S option: classe 2 (start up current: 30mA); SG-PG option: **class 1** (start up current: 10mA); **Reactive energy:** X-S option: class 3 (start up current: 30mA); SG-PG option: class 2 (start up current: 10mA); **V L-L:** ±(1.5% FS+1 DGT); **VL-N:** (0.5%FS+1 DGT); **A:** ±(0.5% FS +1 DGT) from 0.25 to 6A, ±(0.5% FS +7 DGT) from 0.03 to 0.25A; **An:** ±(1.5% FS +1 DGT) from 0.25 to 6A, ±(1.5% FS +7 DGT) from 0.03 to 0.25A; **Voltage control:** programmable window alarm. **An control:** 1 programmable alarm. **Peak factor:** <3 (10A peak max). **Temperature drift:** ≤200ppm/°C. **Current transformer:** prog. ratio from 1 to 999 **Voltage transformer:** prog. ratio from 1.0 to 99.9. **Input impedance (X-S options):** 380/660V_{L-L} (AV5) 1 MΩ ±5%, 120/208V_{L-L} (AV6) 453 KΩ ±5%, Current ≤0.02Ω. **Input impedance (PG-SG options)** 380/660V_{L-L} (AV5) 1 MΩ ±1%, 120/208V_{L-L} (AV6) 1 MΩ ±1%; Current ≤0.02Ω; **Power demand:** integrated value in a programmable time from 1 to 30 min. **Thermal current:** integrated value in a programmable time from 1 to 30 min. **Digital filter:** Filtering range from 0 to 100% of the displayed range; filtering coefficient from 1 to 16 **EMC:** emissions EN50084-1 (residential, class A) Immunity EN61000-6-2 (industrial, class A). **Power supply:** 230V, 115V, 48V, 24VAC (-15%+10%), 50-60Hz; 24 to 48VDC ±20%. **Operating temperature:** from 0° to +50°C (32° to 122°F). **Storage temperature:** from -10° to +60°C (14° to 140°F). **Relative humidity (non condensing):** <90%. **Installation category (IEC 60664):** Cat. III. **Insulation:** AC power supply, 4kV for 60s between measuring input and power supply and between power supply and RS485, 500V for 60s between measuring input and RS485. DC power supply, 500V between meas. input and power supply and between power supply and RS485. **Dielectric strength:** 4kV for 60s. **Standards:** safety EN61010 - IEC-60664. **Approvals:** CE. **Connections:** screw type; Max. cable cross sect.: 2.5mm². **Protection degree** Front: IP40 (WM14 DIN) / IP65 (WM14 96); Terminal blocks: IP20 (WM14 DIN and 96). **Mounting:** DIN-rail mounting (WM14-DIN). Flush mounting (WM14-96). **Housing material:** ABS, self-extinguishing; UL94 V-0. **Dimensions:** see the drawings above. **Weight:** about 400g (packing included). **Additional technical features:** environmental conditions: indoor use only, pollution degree 2, altitude up to 2000m; Max wire size: AWG 14.

OUTPUT SPECIFICATIONS
Serial port RS485 (optional) 2 or 4 wirings. **Comm. protocol:** MODBUS/ JBUS. **Baud rate:** 9600 baud. **Parity:** none. **Line termination:** by means of external jumper. **Line bias:** not available. **Address:** 1 to 255. **Variable to be transmitted:** all the displayed variables.

Digital outputs (only with PG option): number of outputs 2 (one for kWh one for kvarh) Number of pulses: from 0.01 to 999 in compliance with the following formula: **[Psys max (kW or kvar)*pulses (pulses/kWh or kvarh)] <14400**. Output type: relay. min current: 0.05A@250VAC/30VDC max current: 5A@250VAC/30VDC; Electrical life: min 2*10⁶ cycles; Mechanical life: 5*10⁶ cycles; Pulse duration 125 ms (ON), ≥ 125 ms (OFF according to DIN43864). Insulation by means of relays, 4000 V_{RMS} between outputs and measuring inputs, 4000 V_{RMS} between output and supply input. Insulation between the two outputs:1000V_{RMS}.

ITALIANO

- [1]- Connessione da TA 4 fili (3P.n)
- [2]- Connessione da TA/TV 4 fili (3P.n)
- [3]- Connessione ARON da TA/TV (3P.A)
- [4]- Connessione bifase da TA (2P)
- [5]- Connessione trifase da TA carico bilanciato (3P)
- [6]- Connessione monofase da TA (1P)
- [7]- Connessione diretta 4 fili (3P.n) (solo con i modelli PG e SG)
- [A]- Doppia uscita impulsi (disponibile solo con l'opzione PG)
- [B]- RS485 4 fili ([c] ultimo strumento, [d] strumento 1...n, [e] convertitore seriale).

Importante: un solo ingresso amperometrico può essere collegato a terra, come rappresentato negli schemi elettrici sopra riportati.

PRECAUZIONI DI SICUREZZA
Leggere attentamente il manuale di istruzioni. Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa. **Manutenzione:** Assicurarsi che le connessioni previste siano eseguite correttamente al fine di evitare qualsiasi malfunzionamento o danneggiamento dello strumento. Per mantenere pulito lo strumento usare un panno inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di eseguire la pulizia.

CARATTERISTICHE TECNICHE
Hardware: basato su microprocessore. **Tastiera:** 3 tasti.
Sistema elettrico: Selezionabile: monofase, bifase, trifase sbilanciato con o senza neutro; trifase bilanciato; trifase ARON.**Display:** a LED 3x3 DGT; Altezza digiti 14mm (96x96mm) o 9mm (DIN).**Tempo di aggiornamento display:** 700ms. **Corrente nominale:** 5A (da TA). **Massima corrente di ingresso:** 6A (da TA). **Sovraccarico:** 36A (6 *Imax) per 500ms. Tensioni: permanente 1.2 il valore campo di funzionamento Max. **Tensione nominale** AV5: 660 V L-L; AV6: 208 V L-L **Forma d'onda:** onda sinusoidale o distorta.**Metodo di misura:** TRMS **Precisione: W-VA:** ±(1% FS + 1DGT) da 0.25A a 6A, ±(1% FS + 5 DGT) da 0.03 a 0.25A; **var:** ±(2% FS +1DGT) da 0.25 a 6A, ±(2% FS +5 DGT) da 0.03 a 0.25A; **Energia attiva:** opzione X-S: classe 2 (corrente di avvio: 30mA); opzione SG-PG: classe 1 (corrente di avvio: 10mA); **Energia reattiva:** opzione X-S: classe 3 (corrente di avvio: 30mA); opzione SG-PG: classe 2 (corrente di avvio: 10mA); **V L-L:** ±(1.5% FS+1 DGT); **VL-N:** (0.5%FS+1 DGT); **A:** ±(0.5% FS +1 DGT) da 0.25 a 6A, ±(0.5% FS +7 DGT) da 0.03 a 0.25A; **An:** ±(1.5% FS +1 DGT) da 0.25 a 6A, ±(1.5% FS +7 DGT) da 0.03 a 0.25A; **Controllo tensione:** allarme a finestra programmabile, **Controllo An:** allarme programmabile. **Fattore di cresta:** <3 (10A picco max). **Deriva termica:** ≤200ppm/°C. **Rapporto TA:** programmabile da 1 a 999. **Rapporto TV:** programmabile da 1.0 a 99.9. **Impedenza d'ingresso (opzione X-S)** 380/660V_{L-L} (AV5) 1 MΩ ±5%, 120/208V_{L-L} (AV6) 453 KΩ ±5%, Corrente ≤0.02Ω. **(opzione PG-SG)** 380/660V_{L-L} (AV5) 1 MΩ ±1%, 120/208V_{L-L} (AV6) 1 MΩ ±1%; Corrente ≤ 0.02Ω; **Potenza media:** valore integrato in un intervallo di tempo programmabile da 1 a 30 min. **Corrente termica:** valore integrato in un intervallo di tempo programmabile da 1 a 30 min. **Filtro digitale:** campo: da 0 a 100% del campo visualizzato; coefficiente di filtraggio: da 1 a 16. **EMC:** emissioni: EN50084-1 (residenziale, classe A) Immunità: EN61000-6-2 (industriale, classe A). **Alimentazione:** a trasformatore: 230V, 115V, 48V, 24VCA (-15%+10%) 50-60Hz; da 24V a 48VDC ±20%. **Temperatura di funzionamento:** da 0° a +50°C. **Temperatura di immagazzinamento:** da -10° a +60°C. **Umidità relativa (senza condensa):** <90%. **Categoria di installazione (IEC 60664):** Cat. III. **Isolamento:** alimentazione AC: 4kV per 60s tra ing. di misura e alimentazione e tra alimentazione e RS485; 500V per 60s tra ing. misura e RS485. Alimentazione DC: 500V tra ing. misura e alimentazione e tra alimentazione e RS485. **Rigidità dielettrica:** 4kV per 60s. **Norme di riferimento:** EN61010, IEC 60664. **Approvazioni:** CE **Connessioni:** a carrello, sezione max del cavo: 2,5 mm². **Grado di protezione:** frontale: IP40 (WM14 DIN) / IP65 (WM14 96); connessioni: IP20 (WM14 DIN e 96). **Montaggio:** guida DIN (WM14 DIN); pannello (WM14 96). **Materiale:** ABS, autoestinguente; UL94 V-0. **Dimensioni:** vedere i disegni sopra riportati. **Peso:** circa 400g (imballo incluso). **Caratteristiche tecniche addizionali:** condizioni ambientali: solo uso interno, grado di inquinamento 2, altitudine fino a 2000m; Max dimensione cavi: AWG 14

CARATTERISTICHE DI USCITA
Porta seriale RS485 (opzionale) 2 o 4 fili. **Protocollo di comunicazione:** MODBUS/ JBUS. **Velocità di comunicazione:** 9600 baud. **Parità:** nessuna. **Terminalizzazione:** mediante ponticello esterno. **Polarizzazione:** non disponibile. **Indirizzo:** da 1 a 255. **Variabili ritrasmesse:** tutte le variabili visualizzate.

Uscite digitali (solo con opzione PG), numero uscite: 2 (una per i kWh una per i kvarh). Numero di impulsi: da 0.01 a 999 secondo la seguente formula: **[Psys max (kW o kvar)*impulsi (impulsi/kWh o kvarh)] <14400**. Tipo di uscita: relè, corrente minima: 0.05A@250VAC/30VDC corrente massima: 5A@250VAC/30VDC; Vie elettrica: min 2*10⁶ cicli; Vita meccanica: 5*10⁶ cicli; Durata impulso 125 ms (ON), ≥ 125 ms (OFF secondo DIN43864). Isolamento mediante relè, 4000 V_{RMS} tra uscite e ingressi di misura, 4000 V_{RMS} tra uscite e alimentazione. Isolamento tra le due uscite: 1000V_{RMS}

DEUTSCH

- [1]- Stromwandleranschluss, 4-Leitersystem (3P.n)
- [2]- Strom/Spannungswandleranschluss, 4-Leitersystem (3P.n)
- [3]- ARON-Strom/Spannungswandleranschluss (3P.A)
- [4]- 2-Phasen-Stromwandleranschluss (2P)
- [5]- 3 Phasen Stromwandleranschluss, symmetrische Belastung (3P)
- [6]- 1-Phasen-Stromwandleranschluss (1P)
- [7]- 3-Phasen-Direktanschluss, 4-Leitersystem (3P.n) (nur für PG und SG Typ)
- [A]- Doppelter Impulsausgang (verfügbar nur mit der Option PG)
- [B]- RS485 4-Leiter Anschluss ([c] letztes Gerät, [d] Geräte 1...n, [e] serielle Schnittstelle).

Wichtig: nur ein Stromeingang der Stromwandler kann an Erd gemäß Abb. 1-6 angeschlossen werden.

SICHERHEITSMASSNAHMEN
Die Betriebsanleitung aufmerksam lesen. Sollte das Gerät nicht gemäß der Herstellerangaben verwendet werden, könnte der vom Gerät vorgesehene Schutz beeinträchtigt werden. **Wartung:** Um eine Fehlfunktion oder Beschädigung des Gerätes zu vermeiden ist sicherzustellen, dass die Kabel an den Klemmleisten richtig angeschlossen sind. Das Gerät mit einem feuchten Tuch reinigen; keine Scheuer- oder Lösemittel verwenden. Das Gerät vor der Reinigung ausschalten.

TECHNISCHE DATEN
Analysator: Mikroprozessorgesteuert. **Tastenfeld:** 3 Tasten.**Elektrisches Netz:** Wählbar: 1 Phase, 2 Phasen, 3 Phasen mit Nullleiter; 3 Phasen ohne Nullleiter, 3 Phasen ARON.**Anzeige:** LED 3x3stellig; Ziffernhöhe 14mm (96x96mm) oder 9mm (DIN).**Abtastzeit:** 700ms **Nenn-Eingangsstrom:** 5A **Max. Eingangsstrom:** 6A (mit ext. Stromw.). **Überlast:** 36A (6 *Imax) für 500ms; Spannung: Dauer 1,2 * max Vollbereichswert **Nenn-Eingangsspannung:** AV5: 660V L-L; AV6: 208V L-L **Signalform:** sinusförmig oder verzerrt. **Messverfahren:** Echter Effektivwert. **Genauigkeit: W-VA:** ±(1% VB + 1DGT) von 0.25A bis 6A±(1% VB + 5 DGT) von 0.03 bis 0.25A; **var:** ±(2% VB +1DGT) von 0.25 bis 6A ±(2% VB +5 DGT) von 0.03 bis 0.25A; **Wirkleistung:** Option X-S: Klasse 2 (Startstrom: 30mA); Option SG-PG: Klasse 1 (Startstrom: 10mA); **Blindleistung:** Option X-S: Klasse 3 (Startstrom: 30mA); Option SG-PG: Klasse 2 (Startstrom: 10mA); **V L-L:** ±(1.5% VB +1 DGT); **VL-N:** (0.5% VB +1 DGT); **A:** ±(0.5% VB +1 DGT) von 0.25 bis 6A ±(0.5% VB +7 DGT) von 0.03 bis 0.25A; **Spannungsüberwachung:** programmierbarer Fenster-Alarm **Nullleiterstromüberwachung:** 1 programmierbarer Alarm. **Scheitelfaktor:** <3 (10A max Spitze). **Temperaturabweichung:** ≤200ppm/°C. **Stromintegral:** Prog Verhältnis von 1 bis 999 **Spannungswandler:** Prog. Verh. von 1.0 bis 99.9 **Eingangsimpedanz: (Optionen X-S)** 380/660V_{L-L} (AV5) 1 MΩ ±5% 120/208V_{L-L} (AV6) 453 KΩ ±5% Strom <=0.02Ω. **Eingangsimpedanz (Optionen PG-SG)** 380/660V_{L-L} (AV5) 1 MΩ ±1% 120/208V_{L-L} (AV6) 1 MΩ ±1%; Strom: <=0.02Ω; **Mittlere Leistung:** Mittlerer Wert in einer programmierbar Zeit von 1 bis 30 Min. **Stromintegral:** Mittlerer Wert in einer programmierbar Zeit von 1 bis 30 Min.**Digitalfilter:** Filterbereich: von 0 bis 100% des anzeigezeitigen Bereichs; **Filterkoeffizient:** von 1 bis 16 **EMV:** Strahlung: EN50084-1 (Wohnber. Klasse A) Störfestigkeit: EN61000-6-2 (industrie, Klasse A). **Stromversorgung:** 230V, 115V, 24V, 48VAC (-15/ +10%), 50-60Hz; 24 bis 48VDC ±20% **Betriebstemperatur:** von 0° bis +50°C **Lagertemperatur:** von -10° bis +60°C. **Relative Feuchtigkeit:** <90% (ohne Kondensation) **Einsatzklasse (IEC 60664):** Kategorie III. **Isolation:** AC-Stromversorgung, 4kV für 60s zwischen Messeingang und Stromversorgung; zwischen Stromversorgung und RS485, 500V für 60s zwischen Messeingang und RS485. DC-Stromversorgung, 500V zwischen Messeingang und Stromversorgung; zwischen Stromversorgung und RS485. **Durchschlagfestigkeit:** 4kV für 60s. **Normen:** Sicherheit EN61010, IEC 60664. **Kennzeichnung:** CE. Anschlüsse: Schraubklemmen; Max. Leiter-querschnitt: 2,5mm². **Schutzart:** Front: IP40 (WM14 DIN) / IP65 (WM14 96); Anschlüsse: IP20 (WM14 DIN und 96). **Montage:** DIN-Schiene (WM14-DIN). Schrankeinbau (WM14-96). **Gehäusematerial:** ABS, selbststößchend; UL94 V-0. **Abmessungen:** Siehe Abbildungen oben **Gewicht:** Ca. 400g (einschließlich Verpackung). **Zusätzliche technische Daten:** umwelt Bedingungen: nur innere Benutzung, Verschmutzungsgrad 2, Max. Höhe 2000m; Max Kabel Größe: AWG 14.

TECHNISCHE DATEN AUSGANG
Serielle Schnittstelle RS485 (Auf Anfrage): 2 oder 4 Leiter. **Übertragungsprotokoll:** MODBUS/ JBUS. **Baudrate:** 9600 baud **Parität:** Keine. **Leistungsabschluss:** mit externer Brücke. **Leitungsstabilisierung:** nicht vorhanden. **Adresse:** 1 bis 255. **Übertragene Messgröße:** alle angezeigten Messgrößen.

Digitalausgänge (nur mit Option PG) Anzahl der Ausgänge: 2 (1 für kWh, 1 für kvarh) Anzahl der Impulse: von 0.01 bis 999 nach der folgenden Formeln: **[Psys max (kW oder kvar)*Impulse (Impulse/kWh oder kvarh)] <14400**. Ausgangstyp: Relais, min Strom: 0.05A@250VAC/30VDC max Strom: 5A@250VAC/30VDC; Elektr. Lebensdauer: min 2*10⁶ Zyklen; Mech. Lebensdauer: 5*10⁶ Zyklen; Dauer der Impulse 125 ms (ON), ≥ 125 ms (OFF nach DIN43864). **Spannungsfestigkeit** 4000 V_{RMS} Ausgang zu Messeingang, sowie Ausgang zu Versorgungsspannung. **Isolation** zwischen den Ausgängen: 1000V_{RMS}.

Important: seulement une des entrées courant des TI peut être raccordée à la terre suivant les schémas électriques indiqués plus haut.

MESURES DE SECURITE
Lire attentivement le manuel de l'utilisateur. Si l'appareil est utilisé dans des conditions différentes de celles spécifiées par le fabricant, le niveau de protection prévu par l'instrument peut être compromis. **Entretien:** S'assurer

ALARM TYPE	
UP	
DO	
IN	
OUT	

DECIMAL POINT	MAX VALUE
1.11	9.99
11.1	99.9
111	999
1.11K	9.99K
11.1K	99.9K
111K	999K
1.11M	9.99M
11.1M	99.9M
111M	999M

ENGLISH

SETUP OUT 1 / OUT2
ou.1 / ou.2 : setup of output 1 / 2, select:
EnE : retransmits the value of the active energy "Act" or the reactive one "rEA" by means of pulses. "dP" selects the decimal point. "PuL" selects the number of pulses per kWh/kvarh che si desidera generare da 0,01 a 500.
ALr : enables the alarm output. "nd" selects the normally disabled relay or the normally enabled one "nE".
rEn : activates the remote control (by means of serial connection) of the 1 / 2 output.

ALARM SETUP MENU
A.01 : "oFF" disables the alarm A.01, moving to the next one (up to A.16). Any other previously selected setting remains stored. "on" enables the alarm, then select the variable to be controlled:
VAR : select the variable to be controlled (see table "I").
no, to go straight to the settings of the next alarm.
YES, to continue the programming of all other parameters relating to the alarm being set:
d.P.o : disable the alarm at power on, "no" to disable the function or "YES" to enable it.
tYP : select the alarm type: up (uP) or down (do), in window alarm (in), out window alarm (out).
dP : select the position of the decimal point.
Lo.S : select the value of the low setpoint.
Hi.S : select the value of the high setpoint.
dEL : select the delay time on activation from 0 to 255 seconds.
Fun : select the OR or AND function (see the "OR/AND" picture below)
out : select the relay to be enabled in case of alarm. "r1.1" relay output 1 or "r1.2" relay output 2.

IMPORTANT NOTES:

- The measured variable blinks when an alarm occurs (see figure "G" on the left: VL1, 200V). It's possible to link more than one alarm to the same variable, the first alarm condition will make the variable range blink. The "al" (•) LED shows the activation of one of the two outputs (relay or open collector output) in case they are selected as alarm.
- When both digital outputs are installed in the instrument (relay or open collector), it's possible to manage up to 16 alarms that can be linked to output 1 and/or output 2.
- If "var" or "W" are negative, the decimal point on the very right blinks in correspondence with the negative variable (see figure "H" on the left).
- If the instrument displays a negative power, the relevant energy will not be counted.

SAFETY PRECAUTIONS
Carefully read the instruction manual. If the instrument is used in a way which is not specified by the builder, the protection may be impaired.
Maintenance: To keep the instrument clean, use a damp cloth; do not use abrasives or solvents. We suggest you to disconnect the instrument before cleaning it.

ITALIANO

SETUP OUT 1 / OUT2
ou.1 / ou.2 : setup uscita 1 / 2, selezionare:
EnE : ritrasmette il valore dell'energia attiva "Act" o reattiva "rEA" mediante impulsi. "dP" seleziona il punto decimale. "PuL" seleziona il numero di impulsi per kWh/kvarh che si desidera generare da 0,01 a 500.
ALr : attiva l'uscita allarme. "nd" seleziona il relè normalmente disattivato o normalmente eccitato "nE".
rEn : attiva il controllo remoto (mediante connessione seriale) dell'uscita 1/2.

ALARM SETUP MENU
A.01 : "oFF" disabilita l'allarme A.01, passando all'allarme successivo (fino a A.16). Le eventuali impostazioni selezionate precedentemente rimangono memorizzate. "on" abilita l'allarme, quindi selezionare la variabile da controllare:
VAR : scegliere la variabile da controllare (vedi tabella "I").
no, per passare direttamente alle impostazioni dell'allarme successivo
YES, per continuare la programmazione di tutti i parametri relativa all'allarme in questione:
d.P.o : disattivazione dell'allarme all'accensione, "no" per disattivare la funzione o "YES" per attivarla.
tYP : seleziona il tipo di allarme: in salita (uP) o in discesa (do) a finestra interno (in) a finestra esterno (out).
dP : seleziona la posizione del punto decimale.
Lo.S : seleziona il valore della soglia inferiore.
Hi.S : seleziona il valore della soglia superiore.
dEL : seleziona il tempo di ritardo all'attivazione da 0 a 255 secondi.
Fun : seleziona la funzione di OR o di AND (vedere riquadro in basso "AND/OR").
out : seleziona il relè da attivare in caso di allarme "r1.1" uscita relè 1 o "r1.2" uscita relè 2.

NOTE IMPORTANTI:

- La variabile misurata lampeggia se si trova in stato di allarme (vedi figura "G" a sinistra: V L1, 200V). E' possibile abbinare più allarmi alla stessa variabile, la prima condizione di allarme che si verificherà determinerà il lampeggio del campo variabile. La spia "al" (•) indica l'attivazione di una delle due uscite (relè o a collettore aperto) nel caso siano selezionate come allarme.
- Qualora lo strumento abbia installato le due uscite digitali (relè o a collettore aperto) è possibile gestire fino a 16 allarmi che possono essere abbinati all'uscita 1 e/o uscita 2.
- Se "var" o "W" sono negativi il punto decimale all'estrema destra lampeggia in corrispondenza della variabile negativa (vedi figura "H" a sinistra).
- Qualora lo strumento visualizzi una potenza negativa, l'energia relativa non verrà in alcun modo conteggiata.

PRECAUZIONI DI SICUREZZA
Leggere attentamente il manuale di istruzioni. Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa. **Manutenzione:** Per mantenere pulito lo strumento usare un panno inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di eseguire la pulizia.

DEUTSCH

EINSTELLUNG OUT 1 / OUT2
ou.1 / ou.2 : Einstellung Ausgang 1 / 2, wählen:
EnE : nochmalige Übertragung des Wertes der Wirkenergie "Act" oder der Blindenergie "rEA" über Impulse. "dP" Wahl des Dezimalpunkts "PuL" Wahl der Anzahl von Impulsen bei kWh/kvarh von 0,01 bis 500.
ALr : Alarm-Ausgang Aktivierung. "nd" Wahl des Relaisstatus: normal unerregt oder normal erregt "nE".
rEn : Aktivierung des Fernkontrolle (über serielle Schnittstelle) des 1 / 2 Ausgang.

EINSTELLUNG ALARM MENU
A.01 : "oFF" Deaktivierung des Alarms A.01, und weiter zu den nächsten (bis zu A.16). Alle andere Einstellungen bleiben gespeichert. "on" Aktivierung des Alarms und Wahl der zu kontrollierenden Größe:
VAR: Wahl der zu kontrollierenden Größe (siehe Tab. "I").
no, direkt zur Einstellung des nächsten Alarms gehen
YES, alle weiteren Parameter des eingestellten Alarms programmieren.
d.P.o : Desaktivierung des Alarms bei Einschaltung, "no" um diese Funktion zu deaktivieren oder "YES" um die Funktion zu aktivieren.
tYP : Wahl des Typs des Alarms: Höchstwert des Alarms (uP) oder Mindestwert des Alarms (do), int. Fensteralarm (in), ext. Fensteralarm (out).
dP : Wahl der Position des Dezimalpunkts.
Lo.S : Wahl der Mindestschwelligengrenze
Hi.S : Wahl der Hochschwelligengrenze
dEL : Wahl Alarm-Einschaltverzögerung von 0 bis 255 Sek.
Fun : Wahl der OR oder AND Funktion (siehe die "OR/AND" Abbildung hier unten) .
out : Wahl ob Relais normal unerregt. "r1.1" Relaisausgang 1 oder "r1.2" Relaisausgang 2.

WICHTIGE HINWEISE:

- Die gemessene Größe blinkt, wenn ein Alarm aktiviert ist (siehe Abb. "G" links: VL1, 200V). Es ist möglich mehr als einen Alarm mit der selben Größe verbinden; wenn der erste Alarm aktiviert ist, blinkt der Bereich der Größe. Die "al" (•) LED bedeutet die Aktivierung von einem der zwei Ausgänge (Relais oder offener Kollektor Ausgang).
- Wenn beide digital Ausgänge im Gerät vorhanden sind (Relais oder offener Kollektor), ist es möglich bis zu 16 Alarme zu kontrollieren; die 16 Alarme können zu Ausgang 1 und/oder Ausgang 2 verbunden sein.
- Wenn "var" oder "W" negative sind, blinkt der Dezimalpunkt Äußerst Rechts, entsprechend der negativen Größe (siehe Abb. "H" links).
- Sollte negative Energie angezeigt werden, ist zu beachten, dass diese nicht gezählt wird.

SICHERHEITSMABNAHMEN
Die Betriebsanleitung aufmerksam lesen. Sollte das Gerät nicht gemäß der Herstellerangaben verwendet werden, könnte der vom Gerät vorgesehene Schutz beeinträchtigt werden.
Wartung: Das Gerät mit einem feuchten Tuch reinigen; keine Scheuer- oder Lösemittel verwenden. Das Gerät vor der Reinigung ausschalten.

FRANÇAIS

RÉGLAGE OUT 1 / OUT2
ou.1 / ou.2 : réglage sorties 1 / 2, sélectionner:
EnE : retransmission de la valeur de l'énergie active "Act" ou réactive "rEA" par impulsions. "dP" pour sélectionner le point décimal. "PuL" pour sélectionner le nombre d'impulsions par kWh/kvarh de 0,01 à 500.
ALr : activation de la sortie d'alarme. "nd" sélection du relai normalement ouvert ou le relai normalement fermé "nE".
rEn : activation du contrôle à distance (par connexion série) de la sortie 1-2.

MENU RÉGLAGE ALARME
A.01 : "oFF" désactivation de l'alarme A.01, en passant à l'alarme suivante (jusqu'à A.16). Tous les autres réglages restent mémorisés. "on": activation de l'alarme, puis sélectionner la variable à contrôler:
VAR : sélectionner la variable à contrôler (voir table "I").
no, pour aller directement au réglage du prochaine alarme.
YES, pour continuer la programmation de tous les autres paramètres concernant l'alarme sélectionnée:
d.P.o : désactiver l'alarme à l'allumage, "no" pour désactiver la fonction ou "YES" pour l'activer.
tYP : sélectionner le type d'alarme: haute (uP) ou basse (do), alarme dans fenêtre (in), alarme fenêtre extérieure (out).
dP : sélection de la position du point décimal.
Lo.S : sélection valeur du point de consigne basse.
Hi.S : sélection valeur point de consigne haute.
dEL : sélection sur temporisation activée de 0 à 255 sec.
Fun : sélection fonction OR ou AND (voir la figure "OR/AND" dessous).
out : sélection du relai à activer en cas d'alarme Sortie relai 1 "r1.1". Sortie relai 2 "r1.2".

REMARQUES IMPORTANTES:

- La variable mesurée clignote indiquant l'activation d'une alarme (voir figure "G" à gauche: VL1, 200V). Une ou plusieurs alarmes peuvent être connectées à la même variable, la première condition d'alarme fait clignoter la gamme de la variable. L'activation d'une des deux sorties (relais ou collecteur ouvert) est indiqué par le diode "al" (•) s'elles sont sélectionnées comme alarme.
- Quand les deux sorties (relais ou collecteur ouvert) sont installées dans l'appareil, on peut gérer jusqu'à 16 alarmes que peuvent être connectées à la sortie 1 et/ou 2.
- Si "var" ou "W" sont négatives, le point décimal à droite clignote en correspondance avec la variable négative (voir figure "H" à gauche).
- Si l'appareil affiche une puissance négative, l'énergie correspondante ne serait pas considérée.

MESURES DE SECURITE
Lire attentivement le manuel de l'utilisateur. Si l'appareil est utilisé dans des conditions différentes de celles spécifiées par le fabricant, le niveau de protection prévu par l'instrument peut être compromis.
Entretien: Pour nettoyer l'instrument, utiliser un chiffon humide; ne pas utiliser d'abrasifs ou de solvants. Il faut déconnecter le dispositif avant de procéder au nettoyage.

ESPAÑOL

AJUSTE OUT 1 / OUT2
ou.1 / ou.2 : ajuste salida 1 / 2, selección:
EnE : retransmisión del valor de la energía activa "Act" o reactiva "rEA" mediante pulsos. "dP" selecciona el punto decimal. "PuL" selecciona el numero de pulsos para kWh/kvarh de 0,01 a 500.
ALr : activa la salida de alarma. "nd" selecciona el relé normalmente desactivado o normalmente activado "nE".
rEn : activa el control remoto (mediante conexión en serie) de la salida 1/2.

MENU AJUSTE DE ALARMA
A.01 : "oFF" desactiva la alarma A.01, y continua a la alarma siguiente (hasta A.16). Todos los ajustes seleccionados anteriormente permanecen en memoria. "on" permite la habilitación de la alarma, después seleccionar la variable que debe ser controlada:
VAR : seleccionar la variable que debe ser controlada (ver tabla "I").
no, para ajustar directamente la alarma siguiente.
YES, para continuar la programación de todos los parámetros conectados a la alarma seleccionada:
d.P.o : desactivar la alarma al arranque, "no" para desactivar la función o "YES" para activarla.
tYP : selecciona el tipo de alarma: de máximo (uP) o de mínimo (do) alarma dentro de banda (in), alarma fuera de banda (out).
dP : selección de la posición del punto decimal.
Lo.S : selección del límite mínimo.
Hi.S : selección del límite máximo.
dEL : selección del retardo a la conexión (0 a 255 s).
Fun : selección de la función de OR o AND (ver tabla "AND/OR" abajo).
out : selección del relé que debe ser activado en caso de alarma "r1.1" salida relé 1 o "r1.2" salida relé 2.

NOTAS IMPORTANTES:

- La variable medida parpadea en relación a una alarma (ver figura "G" a la izquierda: V L1, 200V). Es posible conectar mas de una alarma a la misma variable, el campo variable parpadea en relación a la primera alarma. El LED "al" (•) indica la activación de una de las dos salidas (relé o a colector abierto) si son seleccionadas como alarma.
- Si las dos salidas digitales (relé o a colector abierto) están instaladas en el equipo es posible la gestión de hasta 16 alarmas que pueden ser conectadas a la salida 1 y/o 2.
- Si "var" o "W" son negativos, el punto decimal a la derecha parpadea en correspondencia a la variable negativa (ver figura "H" a la izquierda).
- Si el equipo indica una potencia negativa, la energía correspondiente no será calculada.

NORMAS DE SEGURIDAD
Leer el manual y seguir atentamente las instrucciones. Si se utiliza el equipo de manera distinta de como indica el fabricante se puede dañar la protección de la que esta provisto el instrumento. **Mantenimiento:** para tener el instrumento limpio, limpiar periódicamente la carcasa con un trapo un poco humedecido. No utilizar productos abrasivos o disolventes. Desconectar el instrumento antes de limpiarlo.

WM14DIN A/WM1496 A Three Phase power analyser

ENGLISH

■ SAFETY PRECAUTIONS

Read carefully the instruction manual. If the instrument is used in a manner not specified by the producer, the protection provided by the instrument may be impaired.

Maintenance: make sure that the connections are correctly carried out in order to avoid any malfunctioning or damage to the instrument. To keep the instrument clean, use a slightly damp cloth; do not use any abrasives or solvents. We recommend to disconnect the instrument before cleaning it.

■ TECHNICAL SPECIFICATIONS

Rated inputs System type: 3 Current (Shunts), Voltage 4.

Accuracy (@25°C ±5°C, R.H. ≤60%) (display, RS485) with CT=1 and VT=1; AV5: 1150V-VA-var. FS:230VLN, 400VLL; AV6: 285V-VA-var. FS:57VLN, 100VLL. Current 0.25 to 6A: ±(0.5% FS +1DGT). From 0.03A to 0.25A: ±(0.5% F.S.+7DGT). Neutral current from 0.25 to 6A: ±(1.5% FS +1DGT) from 0.09A to 0.25A: ±(1.5% F.S.+7DGT). Phase-phase voltage ±(1.5% FS +1 DGT). Phase-neutral voltage ±(0.5% FS + 1 DGT). Active and Apparent power, from 0.25 to 6A: ±(1% FS +1DGT); from 0.03A to 0.25A: ±(1% FS +5DGT). Reactive power from 0.25 to 6A: ±(2% FS +1DGT); from 0.03A to 0.25A: ±(2% FS +5DGT). Active energy Class 1 (Start up current: 30mA). Reactive energy Class 2 (Start up current: 30mA). Frequency ±0.1Hz (48 to 62Hz). Harmonic distortion ±3% F.S. (up to 15th harmonic) (F.S.: 100%).

Additional errors: Humidity<=0.3% FS, 60% to 90% RH.

Temperature drift: 200ppm/°C.

Sampling rate: 1600 samples/s @ 50Hz, 1900 samples/s @ 60Hz.

Display refresh time: 200ms (FFT off) 500ms (FFT on).

Display: Type LED, digit height 14mm (96x96) or 9mm (DIN). Read-out for instant var. 3x3 DGT Read-out for energies 3+3+3 DGT (Max indication: 999 999 99.9) Read-out for hour counter 1+3+3 DGT (Max. indication: h 9 999 9.99).

Measurements: Current, voltage, power, power factor, frequency Type TRMS measurement of distorted waves. Coupling type Direct Crest factor < 3, max 10A peak.

Input impedance: 380/660V-L (AV5) 1.6 MΩ ±5%; 120/208V-L (AV6) 1.6 MΩ ±5%; Current ≤ 0.02Ω

Frequency: 48 to 62 Hz

Overload protection: (max values) Continuous voltage/current AV5: 460VLN/800VLL/6A; AV6: 145VLN/250VLL/6A. For 500ms: voltage/current AV5: 800VLN/1380VLL/36A; AV6: 240VLN/416VLL/36A.

Pulse outputs: Number of outputs: up to 2. Programmabile from 0.01 to 500 pulses per kWh/kvarh. Pulse duration ≥ 100ms <120msec (ON), ≥ 120msec (OFF) according to EN62053-31

Relay outputs: Number of outputs: up to 2, independent. Alarm modes: up alarm, down alarm, in window alarm, out window alarm, for all the mentioned models there is the function "start-up deactivation" available. All alarms can be connected to any one of the available variables (see the table "I"). Set-point adjustment from 0 to 100% of the displayed scale. Hysteresis: from 0 to full scale. On-time delay: 0 to 255s. Output status selectable: normally de-energized and normally energized. Min. response time ≤400ms, filters excluded with FFT off; 1s with FFT on and set-point on-time delay: "0 s".

Note: the 2 digital outputs can also work as one pulse output and one alarm output the 2 outputs can also be controlled through a remote control (RS485).

Static outputs: Purpose for pulse outputs or for alarm outputs Signal VON 1.2 VDC/ max. 100 mA, VOFF 30 VDC max. Insulation by means of optocouplers, 4000 VRMS output to measuring inputs, 4000 VRMS output to power supply input.

Relay outputs: Usage for alarm outputs or for pulse outputs. Relay type: SPST type AC 1-5A @ 250VAC; DC 12-5A @ 24VDC AC 15-1.5A @ 250VAC; DC 13-1.5A @ 24VDC. Insulation 4000VRMS output to measuring input, 4000 VRMS output to supply input.

RS422/RS485 port: (on request) Multidrop bidirectional (static and dynamic variables).

Connections: 2 or 4 wires, max. distance 1200m, termination directly on the instrument. Addresses from 1 to 255, key-pad selectable. Protocol MODBUS/JBUS (RTU). Data (bidirectional). Dynamic (reading only): system and phase variables. Static (writing only): all the configuration parameters. Data format: 1 start bit, 8 data bit, no parity, 1 stop bit. Baud-rate 4800, 9600,19200, 38400bits/s. Insulation by means of optocouplers, 4000 VRMS output to measuring input 4000 VRMS output to supply input **RS232 port:** Halfduplex communication. Type, Point to point connection. 3-wire connections , max. distance 15m Address 1 to 255 key-pad selectable. Protocol MODBUS/JBUS (RTU). Baud-rate 4800, 9600, 19200, 38400 bits/s or other characteristics like R422/RS485 port.

Auxiliary power supply: 90 to 260VAC/DC; 16 to 60VAC/DC.

Power consumption: AC: 6 VA DC: 3.5W

Operating temperature: 0° to +50°C (32° to 122°F). (RH < 90% non condensing). **Storage temperature:** -10° to +60°C (14° to 140°F) (RH < 90% non condensing).

Overvoltage: category Cat. III (IEC 60664, EN60664).

Insulation: (for 1 minute) 4kVACRMS between measuring inputs and power supply, 4kVAC/DC @ ≤ 3mA between measuring inputs and RS485/RS232. 4kVAC RMS between power supply and RS485/RS232.

Dielectric strength: 4kVACRMS (for 1 min).

EMC: emissions, EN61000-6-3 residential environment, commerce and light industry immunity, EN61000-6-2 industrial environment.

Pulse voltage (1.2/50µs): EN61000-4-5.

Safety standards: IEC60664, IEC61010-1/EN60664, EN61010-1 **Approvals:** CE. Conexiones: 5(6) A screw-type Max cable cross sect. area 2.5 mm²

Carlo Gavazzi Controls SpA, Via Safforze, 8 - 32100 Belluno (Italy) Tel. +39 0437 931000, Fax +39 0437 931021

AC 15-1.5A @ 250VCA; DC 13-1.5A @ 24VCC. Isolamento 4000 VRMS uscita verso ingresso di misura, 4000 VRMS uscita verso ingresso di alimentazione.

Porta RS422/RS485: (a richiesta) Multidrop bidirezionale (variabili statiche e dinamiche).

Collegamenti: 2 o 4 fili, max. distanza 1200m, terminazione direttamente sullo strumento. Indirizzi da 1 a 255, selezionabile da tastiera. Protocollo MODBUS/JBUS (RTU). Dati (bidirezionale). Dinamico (solo lettura); variabili di sistema e di fase. Statico: (solo scrittura); tutti i parametri di configurazione. Formato dati: 1 bit di start, 8 bit di dati, nessuna parità,1 bit di stop. Baud-rate 4800, 9600,19200, 38400bits/s. Isolamento per mezzo di optoisolatori, 4000 VRMS uscita verso ingresso di misura 4000 VRMS uscita verso ingresso di alimentazione.

Porta RS232: Comunicazione Halfduplex. Tipo, Collegamento punto a punto. Collegamenti a 3 fili, max. distanza 15 m, Indirizzo da 1 a 255 selez. da tastiera. Protocollo MODBUS/JBUS (RTU). Baud-rate 4800, 9600, 19200, 38400 bits/s altre caratteristiche come la porta R422/RS485.

■ SOFTWARE FUNCTIONS

Password Numeric code of max. 3 digits; 2 protection levels of the programming data. 1st level: password "0", no protection. 2nd level: password from 1 to 999, all data are protected **System selection** 3P = balanced 3-phase (1CT, 3 or 4 wires); 3Pn = unbalanced 3-phase with or without neutral (3 or 4 wires); 3P1 = balanced 3-phase (1CT, 2 wires); 3PA = unbalanced 3-phase ARON connection (3 wires); 2P = 2-phase (3 wires); 1P = single phase (2 wires).

Transformer ratio. CT 1 to 6000. VT/PT 1.0 to 6000.0 **Filter.** Operating range 0 to 100% of the displayed scale. Filtering coefficient 1 to 32. Filter action Measurements, alarms, serial output (fundamental variables: V, A, W and their derived ones).

Displaying Up to 3 variables per page.

Alarms working mode "OR" or "AND" or "OR+AND" functions (see OR/AND table). Freely programmable on up to 16 alarms. The alarms can be connected to any variables available in the " I " table.

Reset. By means of keypad: all variables including instantaneous, min, max, dmd and counters variables. Max: A1, A2, A3, W1, W2, W3, Wdmd1-2-3, Wsys dmd, VAsys dmd; min: PF1, PF2, PF3; A1, A2, A3; V1, V2, V3; - dmd: A1, A2, A3, VA1, VA2, VA3, VAsys, W1, W2, W3, Wsys, A. All counters: total energies: kWh, kvarh; - partial energies: kWh, kvarh; - hour counter. Max and min.

ITALIANO

■ NORME DI SICUREZZA

Leggere attentamente il manuale istruzioni. Qualora l'apparecchio venisse adoperato in un modo non specificato dal costruttore, la protezione prevista dall'apparecchio potrebbe essere compromessa. **Mantenuzione:** assicurarsi che i collegamenti siano effettuati correttamente al fine di evitare qualsiasi malfunzionamento o danneggiamento dello strumento. Per mantenere pulito lo strumento usare un panno leggermente inumidito; non usare abrasivi o solventi. Si consiglia di scollegare lo strumento prima di pulirlo.

■ CARATTERISTICHE TECNICHE

Tipi di sistema ingressi nominali: 3 corrente (shunts), 4 tensione. **Precisione:** (@25°C ±5°C, R.H. ≤60%) (display, RS485) con TA =1 e VT=1; AV5: 1150V-VA-var. FS:230VLN, 400VLL; AV6: 285V-VA-var. FS:57VLN, 100VLL. Corrente: da 0.25 a 6A: ±(0.5% FS +1 DGT), da 0.03A a 0.25A: ±(0.5%F.S.+7DGT). Corrente di neutro da 0.25 a 6A: ±(1.5% FS +1DGT), da 0.09A a 0.25A: ±(1.5%FS+7DGT). Tensione concatenata: ±(1.5% FS + 1 DGT). Tensione stellata: ±(0.5% FS + 1 DGT). Potenza attiva e apparente, da 0.25 a 6A: ±(1% FS +1DGT), da 0.03A a 0.25A: ±(1% FS +5DGT). Potenza reattiva da 0.25 a 6A: ±(2% FS +1DGT), da 0.03A a 0.25A: ±(2% FS +5DGT). Energia attiva classe 1 (corrente di avviamento: 30mA). Energia reattiva classe 2 (corrente di avviamento: 30mA). Frequenza ±0.1Hz (48 a 62Hz). Distorsione armonica ±3% F.S. (fino alla 15a armonica) (F.S.: 100%).

Errori addizionali: Umidità: <=0.3% FS, 60% a 90% U.R.

Deriva termica: 200ppm/°C.

Campanionamento: 1600 campioni/s @ 50Hz, 1900 campioni/s @ 60Hz.

Rinfresco display: 200ms (FFT off) 500ms (FFT on). **Display:** tipo a LED, altezza digit 14mm (96x96) o 9mm (DIN). Visualizzazione var. istantanea 3x3 DGT visualizzazione energie 3+3+3 DGT (Max indicazione: 999 999 99.9) Visualizzazione conta- tore 1+3+3 DGT (Max. indicazione: h 9 999 9.99).

Misure: corrente, tensione, potenza, fattore di potenza, frequenza, TRMS di forme d'onda distorte. Accoppiamento: diretto. Fattore di cresta < 3, max picco 10A.

Impedenza d'ingresso: 380/660V-L (AV5) 1.6 MΩ ±5%; 120/208V-L (AV6) 1.6 MΩ ±5%; Corrente ≤ 0.02Ω

Frequenza: 48 a 62 Hz

Protezione dai sovraccarichi: (valori massimi); continuativa: tensione/corrente, AV5: 460VLN/800VLL/6A; AV6: 145VLN/250VLL/6A. Per 500ms: tensione/corrente AV5: 800VLN/1380VLL/36A; AV6: 240VLN/416VLL/36A.

Uscite impulsive: Numero di uscite: fino a 2. Programmabile da 0.01 a 500 impulsi per kWh/kvarh. Durata dell'impulso: ≥ 100ms <120msec (ON), ≥ 120msec (OFF) secondo EN62053-31

Uscite relé: numero di uscite: fino a 2, indipendenti. Tipo allarme: allarme di massima, allarme di minima, allarme finestra interna, allarme finestra esterna, per tutti i modelli menzionati è disponibile la funzione "disattivazione all'avviamento". Tutti gli allarmi possono essere associati ad un qualsiasi delle variabili disponibili (vedi tabella " I "). Regolazione del set-point da 0 a 100% della scala visualizzata. Isteresi: da 0 al fondo scala. Ritardo all'attivazione: 0 a 255s. Stato dell'uscita: selezionabile: normalmente disattivato e normalmente eccitato. Tempo min. di risposta: ≤400ms, filtri esclusi con FFT off; 1s con FFT on e ritardo attivazione soglia: "0 s".

Nota: le due uscite digitali possono anche lavorare come un'uscita impulsi e un'uscita allarmi. Le due uscite possono essere controllate tramite un controllo remoto (RS485).

Uscite statiche: tipo di utilizzo: per uscite impulsi o uscite allarmi. Segnale VON 1.2 VCC/ max. 100 mA, VOFF 30 VCC max. Isolamento per mezzo di optoisolatori, uscita 4000 VRMS verso ingressi di misura, uscita 4000 VRMS verso ingresso alimentazione.

Uscite relé: utilizzo per uscite di allarme o per uscite impulsi.

Tipi di relé: tipo SPST AC 1-5A @ 250VCA; DC 12-5A @ 24VCC

240VLN/416VLL/36A.

Impulsusangaus: Anzahl der Ausgänge: bis zu 2. Programmierbar von 0.01 bis 500 Impulse pro kWh/kvarh. Impulsdauer ≥ 100ms <120msec (ON), ≥ 120msec (OFF) nach EN62053-31

Relaisausgangs: Anzahl der Ausgänge: bis 2, unabhängig. Alarm Betriebsarten: Aufwärtswartslarm, Abwärtswartslarm, int. Fenster-Alarm, ext. Fenster Alarm, für alle diese Betriebsarten ist die Funktion "Start-up Deaktivierung" verfügbar. Alle die Alarme können verbunden mit allen verfügbaren Größen sein (siehe Tabelle "I"). Sollwert-einstellung von 0 bis 100% der angezeigte Skala.

Hysteresis: von 0 bis volle Größe. On-time Verzögerung: 0 bis 255 s, Ausgangsstatus wählbar; normal unerregt und normal erregt. Min. Ansprechzeit≤400ms, ohne Filter, FFT off; 1 s FFT on. Verzögerung On-time Sollwert: "0 s"

Zu beachten: Die 2 Digitalausgänge können auch als 1 Impuls-Ausgang und 1 Alarm-Ausgang funktionieren. Die 2 Ausgänge können auch durch ein Fernsteuerung kontrolliert werden (RS485).

Statische Ausgänge: Zweck: für Impulsausgänge oder für Alarmausgänge. Signal Vom 1.2VDC/max.100 mA, Voff 30VDC max. Isolation durch Optokoppler 4000 VRms Ausgang zu Messeingängen, 4000 VRMS Ausgang zu Stromversorgungseneingang.

Relaisausgänge: Zweck für Alarmausgänge oder für Impulsausgänge. RelaisTyp: SPST AC 1-5A @ 250VAC; DC 12-5A @ 24VDC AC 15-1.5A @ 250VAC; DC 13-1.5A @ 24VDC. Isolation: 4000VRMS Ausgang zu Messeingang, 4000VRMS Ausgang zu Strom-versorgungseneingang.

Sovratensione: categoria Cat. III (IEC 60664, EN60664).

Isolamento: (per 1 minuto) 4kVACRMS tra ingressi di misura e alimentazione. 4kVCA/CC @ ≤ 3mA tra ingressi di misura e RS485/RS232. 4kVCA RMS tra alimentazione e RS485/RS232.

Rigidità dielettrica: 4kVACARMS (per 1 min).

EMC: emissioni, EN61000-6-3 ambiente residenziale, commercio ed industria leggera; Immunità ambiente industriale EN61000-6-2.

Tensione a impulsi (1.2/50µs): EN61000-4-5.

Norme di sicurezza: IEC60664, IEC61010-1/EN60664, EN61010-1 **Approvazioni:** CE. **Collegamenti:** 5(6) A a vite; Sezione max. cavo: 2.5 mm²

Custodia: Dimensioni (LxHxP) 96 x 96 x 63 mm (versione pannello), 107.5x90x64.5 (versione DIN). **Materiale** ABS autoestinguente: UL 94 V-0. **Montaggio:** pannello (96), guida DIN. **Grado di protezione:** frontale IP40 (versione DIN), IP65 (versione 96). **Morsettiere:** IP20 (versione 96 e DIN). **Peso:** circa 400 g (imballo incluso).

■ FUNZIONII SOFTWARE

Password Codice numerico di max. 3 digits; 2 livelli di protezione dei dati di programmazione: 1° livello: password "0", nessuna protezione; 2° livello: password da 1 a 999, tutti i dati sono protetti.

Selezione sistema 3P = bilanciato trifase (1 TA, 3 o 4 fili); 3Pn = sbilanciato trifase con o senza neutro (3 o 4 fili); 3P1 = bilanciato trifase (1 TA, 2 fili); 3PA = sbilanciato trifase collegamento ARON (3 fili); 2P = bifase (3 fili); 1P = singola fase (2 fili).

Rapporto di trasformazione TA da 1 a 60000. TV da 1.0 a 6000.0 **Filtro.** Campo di funzionamento da 0 a 100% della scala visualizata. Coefficiente di filtro da 1 a 32. Azione del filtro: Misure, allarmi, uscita seriale (variabili fondamentali: V, A, W e loro derivate).

Visualizzazione fino a 3 variabili per pagina.

Modo di funzionamento degli allarmi "OR" o "AND" o funzioni "OR+AND" (vedere tabella AND/OR). Liberamente programmabile fino a 16 allarmi. Gli allarmi possono essere associati a qualsiasi variabile disponibile nella tabella " I ".

Reset. Da tastiera - tutte le variabili incluse le variabili istantanea, min, max, dmd e contatori. Max: A1, A2, A3, W1, W2, W3, Wdmd1-2-3, Wsys dmd, VAsys dmd; min: PF1, PF2, PF3; A1, A2, A3; V1, V2, V3; - dmd: A1, A2, A3, VA1, VA2, VA3, VAsys, W1, W2, W3, Wsys, A. Tutti i contatori: Energie totali: kWh, kvarh; - energie parziali: kWh, kvarh; - contaore - Max. e min.

■ SICHERHEITBESTIMMUNGEN

Bitte lesen Sie sorgfältig die Bedienungsanleitung. Bei von den Angaben des Herstellers abweichendem Gebrauch des Gerätes könnte der Schutz, mit dem das Gerät ausgestattet ist, beschädigt werden. **Wartung:** Sicherstellen, daß die Verbindungen korrekt sind, um falsche Arbeitsweise oder Beschädigung des Instruments zu vermeiden. Reinigen Sie das Gehäuse in regelmäßigen Zeitabständen mit einem Tuch und Reinigungsmittel. Verwenden Sie keine kratzenden Reinigungsmittel oder Lösungsmittel. Schalten Sie das Gerät aus, bevor der Reinigung.

■ TECHNISCHE DATEN

Nenneingänge Systemtyp: 3 Strom (Shunts), Spannung 4. **Genauigkeit** (@25°C ±5°C, R.L. ≤60%) (Anzeige, RS485) mit St.W.=1 und Sp.W.=1; AV5: 1150V-VA-var. BE:230VLN, 400VLL; AV6: 285V-VA-var. FS:57VLN, 100VLL. Strom 0.25 bis 6A: ±(0.5% BE +1 stellig). Von 0.03A bis 0.25A: ±(0.5% BE+7 stellig). Nullleiter Strom von 0.25 bis 6A: ±(1.5% BE +1 stellig), von 0.09A bis 0.25A: ±(1.5% BE+7 stellig). Phase-phase Spannung ±(1.5% BE +1 stellig). Phasen-Neutral Spannung ±(0.5% BE + 1 stellig). Wirkleistung und Scheinleistung, von 0.25 bis 6A: ±(1% BE +1 stellig); von 0.03A bis 0.25A: ±(1% BE +5 stellig). Blindleistung von 0.25 bis 6A: ±(2% BE +1 stellig); von 0.03A bis 0.25A: ±(2% BE +5 stellig). Wirkenergie Klasse 1 (Startstrom: 30mA). Blindenergie Klasse 2 (Startstrom: 30mA). Frequenz: ±0.1Hz (48 bis 62Hz). Harmonische Verzerrung ±3% BE (bis zu 15te Harmonische) (BE.: 100%).

Zusätzliche Fehler: Feuchtigkeit ≤0.3% BE, 60% bis 90% r.L..

Temperaturabweichung: 200ppm/°C.

Abtastrate: 1600 Abtastungen/s @ 50Hz, 1900 Abtastungen/s @ 60Hz.

Anzeigenerneuerungszeit: 200ms (FFT off) 500ms (FFT on).

Anzeige Typ LED, Segmente:14mm hoch (96x96) oder 9mm (DIN). Anzeige für Momentanwerte 3x3 DGT Anzeige für Energie 3+3+3 stellig (Max Anzeige: 999 999 99.9) Anzeige für Stundenzähler 1+3+3 stellig (Max Anzeige: h 9 999 9.99).

Messungen: Strom, Spannung, Leistung, Leistungsfaktor, Frequenz TRMS Messung von verzerrten Wellen. Kopplungsart Direkt Crest-factor < 3, max 10A Spitze.

Eingangsimpedanz: 380/660V-L (AV5) 1.6 MΩ ±5%; 120/208V-L (AV6) 1.6 MΩ ±5%; Strom ≤ 0.02Ω

Frequenz: 48 bis 62 Hz

Überlastschutz: (Max. Werte) fortwährend Spannung/Strom AV5: 460VLN/800VLL/6A; AV6: 145VLN/250VLL/6A.

Für 500ms: Spannung/Strom AV5: 800VLN/1380VLL/36A; AV6:

Tension phase-neutre ±(1.5% PE +1 DGT). Tension phase-neutre ±(0.5% PE +1 DGT). Puissance active et apparent, de 0.25 à 6A: ±(1% PE +1 DGT); de 0.03A à 0.25A: ±(1% PE +5DGT). Puissance réactive 0.25 à 6A: ±(2% PE +1DGT); de 0.03A à 0.25A: ±(2% PE +5DGT). Energie active, classe 1 (Courant de démarrage: 30mA).

Energie réactive, classe 2 (Courant de démarrage: 30mA). Fréquence ±0.1Hz (48 à 62Hz). Distorsion harmonique ±3% PE (jusqu'à la 15ème harmonique) (PE: 100%).

Ereurs additionnelles: Humidité<=0.3% PE, 60% à 90% HR

Dérive de température: 200ppm/°C.

Taux d'échantillonnage: 1600 échantillonnages/s @ 50Hz, 1900 échantillonnages/s @ 60Hz.

Temps de rafraichissement: 200ms (FFT off) 500ms (FFT on).

Afficheur: Type LED, hauteur chiffres 14mm (96x96) ou 9mm (DIN). Lecture des var. instantanées. 3x3 DGT Lecture des énergies 3+3+3 DGT (Indicat. max.: 999 999 99.9) Lecture compteur d'heures 1+3+3 DGT (Max. indication: h 9 999 9.99).

Mesures: courant, tension, puissance, facteur de puissance, fréquence. Méthode de mesure: Mesure de valeur efficace vraie de formes d'ondes distordues. Type de couplage: direct. Facteur de crête. < 3, max 10A crête. **Impédance d'entrée:** 380/660V-L (AV5) 1.6 MΩ ±5%; 120/208V-L (AV6) 1.6 MΩ ±5%; Courant ≤ 0.02Ω

Protection contre les surcharges: (valeur max). Tension/courant continu AV5: 460VLN/800VLL/6A; AV6: 145VLN/250VLL/6A.

Pour 500ms: tension/courant AV5: 800VLN/1380VLL/36A; AV6: 240VLN/416VLL/36A.

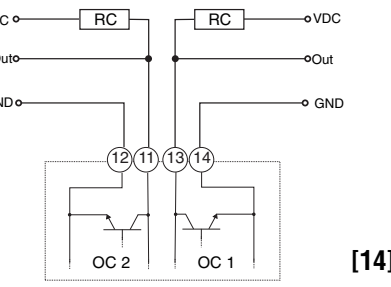

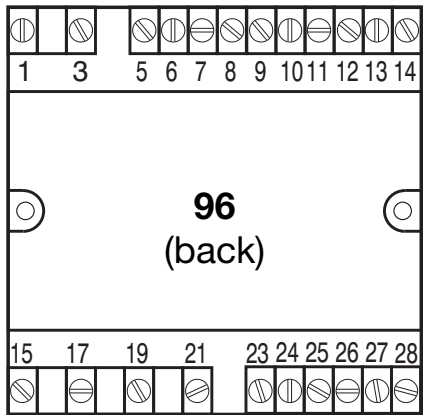

Sorties impulsions: Nombre de sorties: jusqu'à 2. Programmable de 0.01 à 500 impulsions pour kWh/kvarh. Durée d'impulsions ≥100ms <120msec (ON), ≥120msec (OFF) suivant EN62053-31.

Sorties relais: Nombre de sorties: jusqu'à 2, indépendantes. Modes d'alarme: alarme haute, alarme basse, alarme basse avec désactivation au démarrage, alarme dans fenêtre, alarme fenêtre extérieure, pour tous ces modes d'alarme, la fonction "désactivation au démarrage est disponible. Tous les alarmes peuvent être connectés à n'importe quel variable disponible (voir la table "I"). Régulation du point de consigne de 0 à 100% de l'échelle affichée. Hystérésis: de 0 à pleine d'échelle. Tempérisation activée: de 0 à 255 s. Etat sortie: sélectionnable; normalement déactivé, normalement activé. Temps de réponse min.: ≤400ms, filtres exclus avec FFT off; 1 s avec FFT on et point de consigne sur temporisation activée: "0 s".

Remarque: les 2 sorties numériques peuvent aussi fonctionner comme une sortie impulsion et une sortie alarme; Les deux sorties peuvent être contrôlées par un contrôle remote (RS485).

Sorties statiques: type d'emploi: pour sortie impulsions ou pour sorties alarme. Signal VON 1.2 VCC/ max. 100 mA, VOFF 30 VCC max. Isolation au moyen de photocoupleurs; 4000 VRMS de la sortie sur entrée de mesure, 4000 VRMS de la sortie à l'entrée d'alimentation.

Sorties relais: emploi pour sorties alarmes ou sorties impulsions. Type de relais: SPST, AC 1-5A @ 250VCA; DC 12-5A @ 24VCC

 [16]- RS485 connection 2 wires [a]- last instrument, [b]- instrument 1...n, [c]- RS485/RS232 transducer.

ATTENTION

• The current inputs can be connected ONLY by means of current transformers. The direct connection is not allowed.
 • Only one ammeter input can be connected to earth, as shown in the electrical diagrams.

ground of the CT produces a leakage current from 0 to 1,8 mA max dependent on the values of the input impedance, on the type of connection and on the line voltage measured by the instrument .

 [13]- Doppia uscita a relè
 [14]- Doppia uscita a collettore aperto
 Le resistenze di carico (Rc) devono essere dimensionate in modo che la corrente a contatto chiuso sia inferiore a 100mA; la tensione VDC deve essere minore o uguale a 30VCC. VDC: tensione di alimentazione (esterna). Out: contatto di uscita positivo (transistor a collettore aperto). GND: contatto di uscita collegato a massa (transistor a collettore aperto).
 [15]- RS485 connessione 4 fili [a]- ultimo strumento, [b]- strumento 1...n, [c]- convertitore RS485/RS232.
 [16]- RS485 connessione 2 fili [a]- ultimo strumento, [b]- strumento 1...n, [c]- convertitore RS485/RS232.

ATTENZIONE

• Gli ingressi di corrente possono essere collegati SOLO mediante trasformatori amperometrici. La connessione diretta non è permessa.
 • Un solo ingresso amperometrico può essere collegato a terra, come rappresentato negli schemi elettrici.
 • Il collegamento a terra del TA genera una corrente dispersa da 0 a 1,8mA max. dipendente dai valori di impedenza di ingresso, dal tipo di connessione e dalla tensione di linea misurata dallo strumento.

 [11]- 3-phasig, 4-Leiter Anschluß, symmetrisch Last, 1 St.W.
 [12]- Stromversorgung Anschluß. Wert der Schmelzsicherung F: Stromversorgung L von 18 bis 60VAC/DC = 630mA. H Stromversorgung von 90 bis 260 VAC/DC = 125mA.
 [13]- Doppelter Relais-Ausgang
 [14]- Doppelter Open Kollektor Ausgang
 Der Wert des Last-Widerstands (Rc) muß so sein, daß der Strom des geschlossenen Kontakt kleiner als oder gleich 100mA ist. Die VDC Spannung muß kleiner als oder gleich 30VDC sein.
 VDC: äußere Stromversorgung Spannung
 OUT: positiver Ausgangskontakt (offener Kollektor Transistor).
 GND: Ausgangskontakt zu Erdung angeschlossen (offener Kollektor Transistor).
 [15]- RS485 Anschluß 4-Leiter [a]- letztes Gerät, [b]- Geräte 1...n, [c]- RS485/RS232 Umsetzer.
 [16]- RS485 Anschluß 2 Leiter [a]- letztes Gerät, [b]- Geräte 1...n, [c]- RS485/RS232 Umsetzer.

ACHTUNG

• Die Stromeingänge dürfen NUR über Stromwandler angeschlossen werden. Der direkten Anschluß ist nicht möglich.
 • Nur ein Stromeingang der Stromwandler kann an Erde gemäß Abb. 1-11 angeschlossen werden.
 • Der Anschluß an Erde des Stromwandlers erzeugt einen Leckstrom von 0 bis 1,8 mA max abhängig von dem Wert der Eingangswiderstandes, vom Typ des Anschlusses und der Streckenspannung des Gerätes.

 [13]- Double sortie relais
 [14]- Double sortie collecteur ouvert
 La valeur de la résistance de charge (Rc) doit permettre au courant à contact fermé d'être inférieure à 100mA; la tension VDC: doit être inférieure ou égale à 30 VCC. VDC: tension d'alimentation externe. OUT: contact positif de sortie (transistor à collecteur ouvert). GND: contact de sortie connecté à masse (transistor à collecteur ouvert).
 [15]- RS485 connexion 4 fils [a]- dernier appareil, [b]- Appareil 1...n, [c]- convertisseur RS485/RS232.
 [16]- RS485 connexion 2 fils [a]- dernier appareil, [b]- Appareil 1...n, [c]- convertisseur RS485/RS232.

ATTENTION

• Les entrées de courant peuvent être connectés SEULEMENT au moyen de transformateurs de courant. La connexion directe n'est pas permise.
 • Seulement une des entrées courant des TI peut être raccordée à la terre suivant les schémas électriques indiqués sur cette page.
 • La connexion à la terre du transformateur de courant produit un courant de dispersion de 0 à 1,8mA max en fonction des valeurs d'impédance d'entrée, du type de connexion et de la tension de ligne mesurée par l'appareil.

ATENCIÓN

• Las entradas de intensidad pueden ser conectadas SOLO por medio de transformadores de intensidad. La conexión directa no es posible.
 • Sólo puede conectarse a tierra una entrada de intensidad de los CT, según los diagramas de conexiones 1-11.
 • La conexión a tierra del transformador de intensidad genera una corriente de fuga de 0 a 1,8 mA max. que depende de los valores de impedancia de entrada, del tipo de conexión y de la tensión de línea medida por el instrumento.
