Using Caller ID service

Important:

- This unit is Caller ID compatible. To use Caller ID features (such as displaying caller phone numbers), you must subscribe to Caller ID service. Consult your service provider for details.

Caller ID features

When an outside call is received, the caller's phone number can be displayed.

- Phone numbers of the last 50 different callers will be logged in the caller list.
- When caller information is received and it matches a phone number stored in the unit's phonebook:
  - The stored name will be displayed and logged in the caller list.
  - The handset will use the ringtone assigned to the caller's category.
- If the unit is connected to a PBX system, you may not receive the caller information.
- When the caller dialled from an area which does not provide Caller ID service, **"Out of Area"** will be displayed.
- When the caller requested not to send caller information, either no information or **"Private Caller"** will be displayed.

Missed calls

If a call is not answered, the unit treats the call as a missed call. The number of missed calls is shown on the display. This lets you know if you should view the caller list to see who called while you were out.

Category features for Caller ID subscribers

Categories can help you identify who is calling by using different ringtones for different categories of callers. When adding an entry to the phonebook you can assign it to the desired category (page 14). When a call is received from a caller assigned to a category, the category's ringtone you select is used.

Changing category ringtones

You can select a ringtone for each category. If you select **"Ext. Ringtone"**, the unit will use the external ringtone you set on page 18 when calls from this category are received. The default setting is **"Ext. Ringtone"**.

Operating additional units

Additional handsets

Up to 6 handsets can be registered to a single base unit. Additional handsets will give you the freedom to, for example, have an intercom call with another handset while a third handset is on an outside call. See page 4 for information on ordering additional handsets.

Important:

- The additional handset model recommended for use with this unit is noted on page 4. If other model handset is used, certain operations (handset settings, base unit settings, etc.) may not be available.

Additional base units

Handsets can be registered to up to 4 base units, allowing you to add additional base units and extend the area in which your handset(s) can be used. If a handset moves out of range of its base unit when **"Auto"** is selected on base unit selection (page 31), it will look for another base unit to make or receive calls. A base unit and the handsets it communicates with is called a "radio cell".

Note:

- Calls will be disconnected when the handset moves from one radio cell to another.
- Intercom calls and call transfers are only possible between handsets in the same radio cell.

Registering a handset to a base unit

To register an additional handset to a base unit (easy registration)

- If all registered handsets start ringing in step 2, press 【(•))】 to stop. Start again from step 1.
- Charge the batteries of your additional handset for about 7 hours before initial use.
- This registration method cannot be used for handsets that have already been registered to a base unit. Register the handset manually (manual registration; page 31).
