

# SCIENTIFIC CALCULATORS

**Scientific Calculator** Tools for the classroom, the research laboratory, and everywhere in between.  
**Financial Consultant** Quick solutions to complex financial calculations at your fingertips.

## eActivity and Presentation Applications

**eActivity** The eActivity has four advantages over using paper:

1. You can create and prepare your own original activities for the class with eActivity.
2. Students can work on a problem at their own pace.
3. Students can try out various approaches to solving a problem by themselves.
4. It enables texts, expressions, figures and graphs to be presented on the screen of the ClassPad 300PLUS.

\*Comes with snap-on hard case

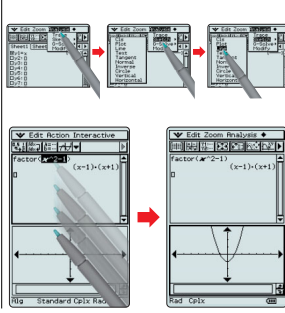

### New Crisp & Clear Display

CASIO's new ClassPad 300PLUS incorporates an impressive bold-type font and a crisp & clear display that provides almost double the character-visibility of the previous model.

### Pen Touch Operation

Various commands can be selected from the pull-down menu using the stylus. Also, you can use the Drag & Drop or Copy & Paste functions for efficient operations.

## ClassPad 300PLUS

### Soft Keyboard

The Soft Keyboard is very efficient for entering various commands or entering complex expressions in natural display format, and it makes the input operations remarkably simple. With this function, it is unnecessary to follow the complicated input method unique to conventional scientific calculators. The ClassPad 300PLUS provides Soft Keyboards of four different display types.

### Natural Input

The Natural Input/Output function enables you to input and display expressions or display the results of the calculation in the same format shown in the textbook.

## Geometric Graphing Functions

### Geometric Graphing

As shown in the following examples, the students can learn the general Theorem by drawing the figures, and they can confirm that the theorem still holds true even when they deform the triangle.

The Animation function enables you to move the drawn geometric figures. With this function, the students can learn visually, for example, how the figure changes when the angles and the values of the coordinates are changed.

### Geometric Graphing by using the Drag & Drop Function

By dragging and dropping a geometric figure to the main application window, you can obtain the numerical data for the figure. And by dragging and dropping the numerical data to the Geometry window, the data can be reflected in the figure.

### Geometry Link Function

The Geometry Link function enables you to dynamically link the eActivity data and the Geometry window data.

## 3-dimensional Graphing

### 3-dimensional Graphing

The 3-dimensional Graphing function enables you to draw and display a 3-dimensional graph defined by the formula  $z = f(x, y)$ . You can split the display window into 3D Graph Editor window and 3D Graph window, or enlarge the 3D Graph window to see a larger graph.

You can rotate the graph as you like by selecting and tapping one of the following commands from the menu.

## Built-in Software

### Spreadsheet

With this function, you can organize and tabularize the collected data or use it for analysis after drawing a statistical graph. Of course, it can also be used effectively for table calculations.

### Verify

With the Verify function, you can transform expressions or adopt solutions in your own way. The unit will verify whether the input calculation formula is in an equivalent relation with the adjacent expression. This function is just perfect for learning how to do equation and integration calculations.

Main Functions

**Algebra Applications**

**Computer Algebra System (CAS)**

Using the Computer Algebra System (CAS), students can factor expressions, find limits of functions and calculate derivatives, integration and Taylor series expressions.

CASIO's CAS is based on the CASIO's original algebra system and enhanced by our R & D team, Professor John Kenney and other math instructors, adopting teachers' advice and suggestion.

**Factorization**     **Differential**     **Taylor expansion**

**Algebra**

This application helps students manipulate equations. They can, for example, expand or simplify equations by themselves in an attempt to arrive at the correct solution. After they learn how to solve the problem in Tutor application, they can make use of the application to master how to solve the algebra problems.

**Step-by-step View** Follow the steps that take a calculation to its result!

**Tutor**

Students can study how to solve algebra problems as ALGEBRA FX 2.0 PLUS shows each step to arrive at the final solution, in a similar way as a teacher does it in class. It works under three different modes.

Set the rate you want for easy calculation of amount plus tax, amount less tax, and tax amount.

### Cost

What is the cost of an item that sells for \$150 after a 30% margin is added?

1 150  $\rightarrow$  COST  $\rightarrow$  105

2 30  $\rightarrow$  MARG  $\rightarrow$  45

3 105  $\rightarrow$  COST  $\rightarrow$  105

### Selling Price

What would the selling price be for an item that costs \$120 after a 40% margin is added?

1 120  $\rightarrow$  COST  $\rightarrow$  120

2 40  $\rightarrow$  MARG  $\rightarrow$  80

3 200  $\rightarrow$  COST  $\rightarrow$  200

### Margin

What is the margin on an item that costs \$1000 and sells for \$2000?

1 1000  $\rightarrow$  COST  $\rightarrow$  1000

2 2000  $\rightarrow$  COST  $\rightarrow$  50
